This 2nd International Symposium on Neglected Influenza Viruses will retain the format, and build on the success of the inaugural symposium held in Florida in 2010. This conference will explore the latest surveillance data, vaccination and control strategies, diagnostic techniques, experimental research data and epidemiological and economic impact studies relating to swine, equine, canine and other nonhuman/nonavian influenza viruses. The main aim of the symposium is to promote a transdisciplinary, coordinated approach to the control of influenza by integrating the scientific inputs from public health, veterinary and environmental health efforts along with basic science.

MARCH 7-8, 2013 DUBLIN, IRELAND

ABSTRACT SUBMISSION
The Scientific Committee invites authors to submit abstracts of original research papers for oral and poster presentation in the following areas:

- Surveillance and Disease Investigation
- Virus Transmission and Control
- Clinical and Experimental Virology
- Emerging Issues and New Developments

Don't forget to submit your abstract!

Abstract submission will close on Saturday, December 1, 2012.
